The Department of Business Law of the Faculty of Law of Lomonosov Moscow State University is pleased to invite you to its regular Digital Law Conference dedicated to **the legal challenges of AI and Digital technologies for sustainable development**.

Working language: *English*.

The XI Moscow Legal Week will take place from November 23 to December 3, 2021. The common theme for all events is "The role of law in ensuring human well-being".

As part of Moscow Legal Week we are holding a panel on law and digital technologies with the topic "The role of AI and digital technologies in achieving the SDGs: legal issues".

It is about the possibilities of artificial intelligence technology application for the UN Sustainable Development Goals, many of which are precisely related to human well-being. Artificial intelligence and other digital technologies help achieve the goals of sustainable development of society. Today this agenda is relevant in all countries of the world and internationally. Artificial intelligence, blockchain, and Big Data help solve specific problems in business, the social sphere, public governance, and justice.

At the same time, the application of emerging state-of-the-art digital technologies poses risks and challenges to society. Therefore, researchers in many countries are addressing issues of cybersecurity, protection against data leakage, hacking of platform systems, discrimination of social groups. No less relevant is the problem of the environment, achieving the goals of the climate agenda in the trend of the Paris Agreement conference.

That is not an exhaustive list of the digitalization problems of society, the economy, and public governance processes.

We invite our colleagues to be speakers and participate in the discussion during Legal Week in Moscow.
